Tracking Environmental Change Using Lake Sediments

Data Handling and Numerical Techniques

- ▶ **First book covering full range of modern data-analytical and statistical techniques used in paleolimnology and paleoecology**
- ▶ **Features exploratory data analysis, error estimation, clustering, ordination and modern statistical learning techniques**
- ▶ **Includes case studies on human impact, lake development and climate change**

Numerical and statistical methods have rapidly become part of a palaeolimnologist's tool-kit. They are used to explore and summarise complex data, reconstruct past environmental variables from fossil assemblages, and test competing hypotheses about the causes of observed changes in lake biota through history. This book brings together a wide array of numerical and statistical techniques currently available for use in palaeolimnology and other branches of palaeoecology.
